

# Product Card Page

## Overview

This project is a simple and elegant Product Card Page designed using HTML and CSS. It provides a clean and user-friendly interface to display product information in a concise format. The purpose of this project is to showcase a minimalistic yet effective way to present product details on a web page.

## Description

The Product Card Page features a responsive layout, ensuring a seamless viewing experience across various devices. Each product card includes essential details such as product name, image, description, and price. The design focuses on simplicity and readability, making it easy for users to quickly scan and understand the information.

## Preview

## Technologies Used

- **HTML:** The structure of the web page is built using HTML, providing a solid foundation for content presentation.
- **CSS:** Styling is implemented using CSS to create a visually appealing and responsive design.

## Features

- Responsive design for optimal viewing on different devices.
- Clean and intuitive layout for easy navigation.
- Minimalistic design to highlight essential product details.
- Easy to integrate into existing projects.

## How to Use

1. Clone the repository:

```
https://github.com/abhinay-kumar47/Product_card_page.git
```

2. Open the `index.html` file in your preferred web browser.
3. Customize the content in the HTML file to showcase your own products.

## Contribution

Contributions are welcome! If you find any issues or have suggestions for improvement, feel free to open an issue or submit a pull request.
